

Car Wax And Its Application

Car Wax acts as a coating on the car exterior and helps in preventing oxidation and protects the paint from getting faded. Car Wax enhances the beauty of the exterior of the car by increasing the life of the paint finish. Car Wax also helps in concealing any marks that may be present on the surface. When the wax diminishes with time, the marks on the exterior would become visible.

It is true that it takes time and effort to wax a car but the result is worth spending time at as you are able to shield your car from environmental factors which can cause the paint to fade. There are many people who believe that applying car wax to the surface once is enough and it would provide protection for a long time. It is quite contrary because the wax needs to be applied on months intervals.

Choosing the right kind of wax for your car is very important to assure the shine for your car. You should choose a wax that does not contain abrasives. A wax containing abrasives can cause scratches to the surface and can haze the paint.

Most experts consider Carnauba wax to be of very good quality. Carnauba Wax is more expensive but is better than the others because of its ability to stick and being easier to buff. However, hard work is still required during the application no matter how good the quality of the Car Wax is. Before applying the Car Wax, it is recommended to read the instructions on the package. Instead of applying the Car wax on the entire surface at once, it should be first tested on a patch.

When applying the Car Wax, it should be assured that the car is not parked in direct sunlight. This is because the [car wax](#) works better on a surface that is relatively cool. While applying Car Wax, one sections should be completed before proceeding to the other one.

You should wash and dry the car properly before applying wax to it. A Car Wax is generally considered good if it is relatively difficult to apply. This is due to the reason that the car waxes which are difficult to apply are effective for a shorter period of time.

You should use a Wax sponge for applying the Car Wax. Use circular motions during the application of the Wax and you should take care that the wax doesn't get into seams and joints. If this happens, a toothbrush can be used for removing it. A cloth towel can be used for wiping off the wax. The Car Wax should not be left for more than 2 hours because it would be difficult to remove. Related Information [Waterless car washing](#) --
